

REDUCES EVAPORATION & SAVES WATER

Aqua Blanket™

The Proven Solution for Swimming Pool Water Conservation

“Six to eight feet a year is simply the evaporation rate in the parched Southwest,” writes Scott Webb, Executive Editor of AQUA Magazine in his editorial entitled “It’s Time.” “We can’t say we’re serious about conserving water if we leave (a swimming pool) sitting out in the sun,” Webb continues. “It’s time for every pool in the SW to be covered.”

A pool cover, or solar blanket, will physically cover the pool and reduce evaporation. But traditional covers are hard to maneuver and prevent you from enjoying the the beauty of your pool. **Now you can have the benefits of a pool cover without the hassle. Save water and its replacement cost with Aqua Blanket™, the “pool cover in a bottle.”**

A Southwest pool will lose ALL OF ITS **18,000 gallons of water every year through evaporation***

UP TO **40% OR **7,200** gallons will be conserved with Aqua Blanket™**

How does Aqua Blanket™ work?

Its advanced *Monolayer Technology* modifies the surface layer of water, just one molecule deep, allowing for dramatically reduced evaporation.

- You cannot see it, feel it, smell it or taste it
- Long-lasting, only 1 small dose per week
- Natural plant-derived formulation
- Very stable unlike other liquid products based on volatile alcohols

Aqua Blanket™ suppresses pool water evaporation

- Non-toxic and biodegradable
- Safe for all pool surfaces, including vinyl
- Compatible with all sanitizing methods
- Conserves your water and your money

Save water AND preserve the beauty and instant availability of your pool!
